

Personalisation and encoding

In addition to actually producing cards, PAV also offers you a whole range of additional card-related services. These include printing, personalising and encoding your cards. The range of services extends from visual personalisation to loading Java applications.

Our supplementary services in a nutshell:

- Laser marking
- Thermotransfer
- Image management (including personalisation of photos)
- Chip encoding (contactless and contact)

- Loading Java applications
- Key management
- SAM card
- Mass personalisation of chip cards (e.g. eTickets for VDV (German Association of Transport Enterprises) core application)

Other services

- Lettershop
- Card production in high-security zone
